Brisbane Airport Atelier: Team Delta
5 & 6 May 2011

Research team:

Philip Crowther  QUT
Rosemary Kennedy  QUT
Mark Fuller  AECOM
Tim Hill  Donovan Hill Architects
Ben Lyons  Humphreys Reynolds Perkins
Malcolm Middleton  Malcolm Middleton Architects
Lawrence Toaldo  Conrad Gargett Architects
Mark Scanlan  Qantas
Brain McGuikan
Paul Schmidt
Andrew Douglas  Andrew Douglas Commercial Lawyers
George Delibaltas  Brisbane Airport Corporation

Research Background:

This architectural and urban design project was conducted as part of the Brisbane Airport Corporations master-planning Atelier, run in conjunction with City Lab. This creation and innovation event brought together approximately 80 designers, associated professionals, and both local and state government representatives to research concepts for future development and planning of the Brisbane airport site. This particular project, as one of several developed as part of this event, represents the work of a multi-disciplinary team.

This design was judged as a winning proposal by an independent jury which included the Queensland Government Architect, the Senior Deputy Vice Chancellor of the University of Queensland, the CEO of Brisbane Airport Corporation, and Stage Government Ministers.

The design proposal was widely publicised and incorporated into the briefing document for the subsequent international competition (by expressions of interest) for the design of the new Property Master Plan 2011 for Brisbane Airport Corporation.

Research Proposal:

The Team Delta research project explored the development of a new precinct cluster around the existing international terminal building; with a view of reinforcing the sense of place and arrival. The development zone explores the options of developing a subtropical character through landscape elements such as open plazas, tourist attractions, links to existing adjacent waterways, and localised rapid transport options. The proposal tests the possibilities of developing a cultural hub in conjunction with transport infrastructure and the airport terminal(s).
